Summary

AI engineer building end-to-end LLM-powered systems — from prompt pipelines and Gemini API integrations to agentic workflows and production deployment. Built a multi-tenant AI SaaS (FastAPI + React + Gemini) with structured outputs, RBAC, and payment systems. Separately deployed a production ML system with drift monitoring on 7,000+ customers. Comfortable building fast, breaking things, and iterating.

Skills

Languages: Python, SQL, JavaScript, TypeScript

Ai LLMs: Gemini API, LLM integration, structured outputs, prompt engineering, RAG (conceptual), agentic pipelines

Libraries & Framework: React, FastAPI, Flask, Scikit-learn, XGBoost, Streamlit

Backend & APIs: REST APIs, JWT/RBAC, SQLAlchemy, Webhooks (HMAC), SQLAlchemy

Database: PostgreSQL, Redis, MySQL, MongoDB

DevOps & Tools: Docker, Git, AWS, Power BI

Projects

AI Resume Screener — Agentic LLM Pipeline (B2B SaaS) | View Project [🔗](#) **April 2026 – May 2026**

React, TypeScript, FastAPI, PostgreSQL, Docker, Gemini API

- Built an end-to-end **LLM pipeline** using Gemini API: PDF parsing → structured prompt → JSON output with match scores, skill gaps, and candidate insights — no human in the loop.
- Designed multi-tenant backend (**FastAPI + PostgreSQL + RBAC + JWT**) supporting role-based access for recruiters and admins; **integrated Razorpay with HMAC webhook** verification.
- Implemented structured output extraction from LLM responses to reliably parse candidate data into typed schemas — **zero hallucination tolerance** on critical fields.

Customer Churn Prediction System | View project [🔗](#)

Jan 2026 – April 2026

Python, FastAPI, Streamlit, XGBoost, Docker

- Engineered end-to-end ML system on 7,000+ telecom customers; achieved **ROC-AUC 0.84** and **88% recall**, catching 9 in 10 at-risk customers before churn.
- Reduced false negatives **23%** over baseline by **threshold-optimizing XGBoost** (threshold=0.22 via cost matrix: FN=10×FP).
- Deployed containerized **REST API (FastAPI + Docker)** with **Redis caching**, cutting redundant inference to zero for repeat queries.
- Built Streamlit dashboard with SHAP waterfall explanations for non-technical stakeholders; added PSI-based drift monitoring across 3 key features.

Vendor Performance Analysis | View Project [🔗](#)

Sep 2025 – Oct 2025

SQL, Python, Power BI

- Surfaced **\$2.71M** in unsold inventory and **65.7%** supplier concentration risk via **SQL ETL pipeline** (CTEs, multi-source joins).
- Built Power BI decision dashboard enabling purchasing teams to act on vendor data independently.

Education

B. Tech. in Computer Science and Engineering

May 2026

Vellore Institute of Technology, Bhopal

CGPA: 7.76 / 10

Certifications & Training

- Oracle Cloud Infrastructure AI Foundation Associate Certificate.
- Complete Data Analytics Bootcamp – Udemy
- Deloitte Australia Data Analytics Job Simulation Certificate
- AWS Solution Architect Training – Ethnus
